

# Package: mspms (via r-universe)

June 21, 2026

**Type** Package

**Title** Tools for the analysis of MSP-MS data

**Version** 1.4.0

**Description** This package provides functions for the analysis of data generated by the multiplex substrate profiling by mass spectrometry for proteases (MSP-MS) method. Data exported from upstream proteomics software is accepted as input and subsequently processed for analysis. Tools for statistical analysis, visualization, and interpretation of the data are provided.

**License** MIT + file LICENSE

**Encoding** UTF-8

**RoxygenNote** 7.3.3

**Depends** R (>= 4.4.0)

**biocViews** Proteomics, MassSpectrometry, Preprocessing

**LazyData** true

**Imports** QFeatures, limma, SummarizedExperiment, magrittr, rlang, dplyr, purrr, stats, tidyr, stringr, ggplot2, ggseqlogo, heatmaply, readr, rstatix, tibble, ggpubr, imputeLCMD

**Suggests** knitr, testthat (>= 3.0.0), downloadthis, DT, rmarkdown, BiocStyle

**Config/testthat/edition** 3

**URL** <https://github.com/baynec2/mspms>

**BugReports** <https://github.com/baynec2/mspms/issues>

**VignetteBuilder** knitr

**Config/pak/sysreqs** cmake libglpk-dev make libmagick++-dev gsfonts libicu-dev libuv1-dev libxml2-dev libssl-dev libx11-dev zlib1g-dev

**Repository** <https://bioc-release.r-universe.dev>

**Date/Publication** 2026-04-28 13:04:02 UTC

**RemoteUrl** <https://github.com/bioc/mspms>

**RemoteRef** RELEASE\_3\_23

**RemoteSha** e8f7cf2f7fb0a8c36f8e197fb47849fc0d3fbdee

all\_possible\_8mers\_from\_228\_library

*all\_possible\_8mers\_from\_228\_library* All possible 8mers from the standard (as of 26April2024) 228 MSP-MS peptide library (This is equivalent to the result of `mspms::calculate_all_cleavages(mspms::peptide_library$real_cleavage_seq,n=4)` vector of the 14 AA peptides used in the library.

---

**Description**

all\_possible\_8mers\_from\_228\_library All possible 8mers from the standard (as of 26April2024) 228 MSP-MS peptide library (This is equivalent to the result of `mspms::calculate_all_cleavages(mspms::peptide_library$real_vector of the 14 AA peptides used in the library.`

**Usage**

```
all_possible_8mers_from_228_library
```

**Format**

```
## 'all_possible_8mers_from_228_library' A vector with 2964 entries
```

**Source**

<standard peptide library used with MSP-MS method in the O'Donoghue lab as of 26April2024>

---

```
calculate_all_cleavages
```

*calculate\_all\_cleavages calculate all possible cleavages for a defined peptide library containing peptides of the same length.*

---

**Description**

calculate\_all\_cleavages calculate all possible cleavages for a defined peptide library containing peptides of the same length.

**Usage**

```
calculate_all_cleavages(peptide_library_seqs, n_AA_after_cleavage = 4)
```

**Arguments**

```
peptide_library_seqs
```

The sequences of each peptide in the peptide library. They should all be the same length.

```
n_AA_after_cleavage
```

The number of AA after (and before) the cleavage site to consider.

**Value**

a vector of all the possible cleavages for the peptide library sequences

**Examples**

```
calculate_all_cleavages(mspms::peptide_library$library_real_sequence,
  n_AA_after_cleavage = 4
)
```

check\_file\_is\_valid\_diann

*check\_file\_is\_valid\_diann* Check to make sure the input data looks like the expected DIA-NN output file.

---

### **Description**

check\_file\_is\_valid\_diann Check to make sure the input data looks like the expected DIA-NN output file.

### **Usage**

```
check_file_is_valid_diann(diann_data)
```

### **Arguments**

diann\_data      pg\_matrix.tsv file generated by DIA-NN and read into R.

### **Value**

a stop command with a informative message if file looks unexpected. otherwise, nothing.

---

check\_file\_is\_valid\_fragpipe

*check\_file\_is\_valid\_fragpipe* Check to make sure the input data looks like the expected FragPipe file.

---

### **Description**

check\_file\_is\_valid\_fragpipe Check to make sure the input data looks like the expected FragPipe file.

### **Usage**

```
check_file_is_valid_fragpipe(fragpipe_data)
```

### **Arguments**

fragpipe\_data    combined\_peptide.tsv file generated by FragPipe read into R.

### **Value**

a stop command with a informative message if file looks unexpected. otherwise, nothing.

---

`check_file_is_valid_pd`

*check\_file\_is\_valid\_pd* Check to make sure the input data looks like the expected ProteomeDiscoverer file.

---

**Description**

`check_file_is_valid_pd` Check to make sure the input data looks like the expected ProteomeDiscoverer file.

**Usage**

```
check_file_is_valid_pd(pd_data)
```

**Arguments**

`pd_data` PeptideGroups.txt file generated by ProteomeDiscover and read into R.

**Value**

a stop command with a informative message if file looks unexpected. otherwise, nothing.

---

`colData`

*colData* A tibble containing the colData associated with an experiment to proc

---

**Description**

`colData` A tibble containing the colData associated with an experiment to proc

**Usage**

```
colData
```

**Format**

```
## 'colData' A tibble: 42 × 4
```

**Source**

`colData` corresponding to cathepsin A-D MSP-MS experiment

---

|                              |                        |
|------------------------------|------------------------|
| <code>generate_report</code> | <i>generate_report</i> |
|------------------------------|------------------------|

---

## Description

wrapper function to generate an automatic .html report of a basic mspms analysis.

## Usage

```
generate_report(  
  prepared_data,  
  peptide_library = mspms::peptide_library,  
  n_residues = 4,  
  outdir = getwd(),  
  output_file = paste0(Sys.Date(), "_mspms_report.html")  
)
```

## Arguments

|                              |   |
|------------------------------|---|
| <code>prepared_data</code>   | a QFeatures object containing a SummarizedExperiment named "peptides".  |
| <code>peptide_library</code> | peptide library used with experiment. Contains columns "library_id", "library_match_sequence", and "library_real_sequence". |
| <code>n_residues</code>      | the number of amino acid residues before and after the cleavage site to generate a cleavage seq for.                        |
| <code>outdir</code>          | the output directory you would like to render the report to.  |
| <code>output_file</code>     | the file name to export.  |

## Value

a knitted .html report of the mspms analysis.

## Examples

```
generate_report(mspms::peaks_prepared_data)
```

---

|             |                    |
|-------------|--------------------|
| limma_stats | <i>limma_stats</i> |
|-------------|--------------------|

---

**Description**

Calculates statistics for each condition relative to time 0 using limma for differential analysis. Results are then formatted to be consistent with results produced by other statistic approaches used in the mspms package (`log2fc_t_test`).

**Usage**

```
limma_stats(processed_qf)
```

**Arguments**

`processed_qf` mspms data in a QFeatures object.

**Value**

a tibble containing statistics

**Examples**

```
mspms_limma_results <- limma_stats(mspms::processed_qf)
```

---

|               |                      |
|---------------|----------------------|
| log2fc_t_test | <i>log2fc_t_test</i> |
|---------------|----------------------|

---

**Description**

Calculates the log2 fold change and t-test statistics given a user specified reference variable and value.

**Usage**

```
log2fc_t_test(processed_qf, reference_variable = "time", reference_value = 0)
```

**Arguments**

`processed_qf` mspms data in a QFeatures object.  
`reference_variable`  
the colData variable to use as reference  
`reference_value`  
the value of the colData variable to use as reference

**Value**

a tibble containing log2fc and t test statistics

**Examples**

```
log2fc_and_t_test <- log2fc_t_test(mspms::processed_qf)
```

---

|                    |  |
|--------------------|--|
| log2fc_t_test_data | <i>log2fc_t_test_data</i> A tibble containing the results of t-tests and log2fc compared to time 0 14,497 × 19 |
|--------------------|--|

---

**Description**

log2fc\_t\_test\_data A tibble containing the results of t-tests and log2fc compared to time 0 14,497 × 19

**Usage**

```
log2fc_t_test_data
```

**Format**

```
## 'peaks_prepared_data' A tibble: 14,497 × 19
```

**Source**

<mspms processed data originally from PEAKS files found in "tests/testdata/protein-peptides-id.csv" and "tests/testdata/protein-peptides-lfq.csv">

---

|            |   |
|------------|---|
| mspms_tidy | <i>mspms_tidy</i> Convert a SummarizedExperiment object within a QFeatures object into a tidy tibble. |
|------------|---|

---

**Description**

mspms\_tidy Convert a SummarizedExperiment object within a QFeatures object into a tidy tibble.

**Usage**

```
mspms_tidy(processed_qf, se_name = "peptides_norm")
```

**Arguments**

|              |  |
|--------------|--|
| processed_qf | a QFeature object containing rowData and colData.              |
| se_name      | the name of the SummarizedExperiment you would like to extract |

**Value**

a tibble containing all the rowData, colData, and assay data for the specified SummarizedExperiment.

**Examples**

```
mspms_data <- mspms_tidy(mspms::processed_qf)
```

---

|                 |  |
|-----------------|--|
| mspms_tidy_data | <i>mspms_tidy_data</i> A tibble containing tidy data derived from QFeatures object |
|-----------------|--|

---

**Description**

mspms\_tidy\_data A tibble containing tidy data derived from QFeatures object

**Usage**

```
mspms_tidy_data
```

**Format**

```
## 'mspms_tidy_data' A tibble:
```

**Source**

```
processed_qf
```

---

|                     |  |
|---------------------|--|
| peaks_prepared_data | <i>peaks_prepared_data</i> A QFeatures object prepared from PEAKS data of cathepsin data/. |
|---------------------|--|

---

**Description**

peaks\_prepared\_data A QFeatures object prepared from PEAKS data of cathepsin data/.

**Usage**

```
peaks_prepared_data
```

**Format**

```
## 'peaks_prepared_data' An instance of class QFeatures containing 1 assays: [1] peptides: SummarizedExperiment with 2071 rows and 42 columns
```

```
peptides Peptide Sequence Detected ...
```

**Source**

<mspms processed data originally from PEAKS files found in "tests/testdata/protein-peptides-id.csv" and "tests/testdata/protein-peptides-lfq.csv">

---

peptide\_library      *peptide\_library*

---

**Description**

This is the 228 peptide library used by the O'Donoghue lab as of 26April2024.

**Usage**

peptide\_library

**Format**

## 'peptide\_library' A data frame with 228 rows and 3 columns:

**library\_reference\_id** reference id of the detected peptide as put in upstream software

**library\_match\_sequence** the sequence match to the peptide library, methionine is replaced with norleucine, which should function the same as methionine for proteases but has the same mass as L

**library\_real\_sequence** Ls corresponding to norleucine are replaced back with n (for norleucine )

...

**Source**

<O'Donoghue lab as of 26April2024 >

---

plot\_all\_icelogos      *plot\_all\_icelogos*

---

**Description**

Easily plot a iceLogo corresponding to peptides of interest across each condition of an experiment.

**Usage**

```
plot_all_icelogos(
  sig_cleavage_data,
  type = "percent_difference",
  pval = 0.05,
  background_universe = mspms::all_possible_8mers_from_228_library
)
```

**Arguments**

|                     |  |
|---------------------|--|
| sig_cleavage_data   | a tibble of data of interest containing a column labeled peptide, cleavage_seq, and condition  |
| type                | this is the type of iceLogo you would like to generate, can be either "percent_difference" or "fold_change".   |
| pval                | this is the pvalue threshold ( $\leq$ ) to consider significant when determining the significance of the sig_cleavages relative to the background at each position of the iceLogo. |
| background_universe | this is a list cleavages you would like to compare to as background of the iceLogo   |

**Value**

a ggplot object that shows the motif of the cleavage sequences

**Examples**

```
# Determining cleavages of interest
sig_cleavage_data <- mspms::log2fc_t_test_data %>%
  dplyr::filter(p.adj <= 0.05, log2fc > 3)
# Plotting a iceLogo for each condition.
plot_all_iceLogos(sig_cleavage_data)
```

---

```
plot_cleavages_per_pos
      plot_cleavages_per_pos
```

---

**Description**

plot the number of cleavages at each

**Usage**

```
plot_cleavages_per_pos(sig_cleavage_data, ncol = NULL)
```

**Arguments**

|                   |  |
|-------------------|--|
| sig_cleavage_data | a tibble of data of interest containing a column labeled peptide, cleavage_seq, condition, and cleavage_pos. |
| ncol              | the number of columns to plot.   |

**Value**

a ggplot2 object

**Examples**

```
# Defining the significant peptides
sig_cleavage_data <- log2fc_t_test_data %>%
  dplyr::filter(p.adj <= 0.05, log2fc > 3)
# Plotting
p1 <- mspms::plot_cleavages_per_pos(sig_cleavage_data)
p1
```

---

plot\_heatmap

*plot\_heatmap*

---

**Description**

This produces a heatmaply interactive heatmap of the QFeatures object with color bars representing the condition and time for each sample in each row.

**Usage**

```
plot_heatmap(
  mspms_tidy_data,
  value_colname = "peptides_norm",
  scale = "column",
  plot_method = "plotly",
  show_dendrogram = c(TRUE, TRUE)
)
```

**Arguments**

`mspms_tidy_data` tidy mspms data (prepared from QFeatures object by `mspms_tidy()`)

`value_colname` the name of the column containing values.

`scale` how would you like the data scaled? default is none, but can also be "row", "column", or "none"

`plot_method` what plot method would you like to use, can use plotly or ggplot2.

`show_dendrogram` Logical vector of length two, controlling whether the row and/or column dendrograms are displayed. If a logical scalar is provided, it is repeated to become a logical vector of length two.

**Details**

Each column has a colored bar representing whether the peptide is a cleavage product or a full length member of the peptide library.

**Value**

a heatmaply interactive heatmap

**Examples**

```
plot_heatmap(mspms::mspms_tidy_data)
```

---

```
plot_icelogo          plot_icelogo
```

---

**Description**

This function plots the cleavage motifs that were enriched relative to background as implemented in the iceLogo method. <https://iomics.ugent.be/icelogoserver/resources/manual.pdf>

**Usage**

```
plot_icelogo(
  cleavage_seqs,
  background_universe = mspms::all_possible_8mers_from_228_library,
  pval = 0.05,
  type = "percent_difference"
)
```

**Arguments**

`cleavage_seqs` these are the cleavage sequences of interest

`background_universe` this is a list of cleavage sequences to use as the background in building the iceLogo.

`pval` this is the pvalue threshold ( $\leq$ ) to consider significant when determining the significance of the sig\_cleavages relative to the background at each position of the iceLogo.

`type` this is the type of visualization you would like to perform, accepted values are either "percent\_difference" or "fold\_change".

**Value**

a ggplot2 object

**Examples**

```
# Determining significant cleavages for catA
catA_sig_cleavages <- mspms::log2fc_t_test_data %>%
  dplyr::filter(p.adj <= 0.05, log2fc > 3) %>%
  dplyr::filter(condition == "CatA") %>%
  dplyr::pull(cleavage_seq) %>%
  unique()

# Plotting icelogo
plot_icelogo(catA_sig_cleavages,
  background_universe = all_possible_8mers_from_228_library
)
```

---

plot\_nd\_peptides      *plot\_nd\_peptides*

---

### Description

plot the percentage of samples each peptide from library was undetected in (if the percentage is > 0).

### Usage

```
plot_nd_peptides(  
  processed_qf,  
  peptide_library_ids = mspms::peptide_library$library_id  
)
```

### Arguments

processed\_qf      a QFeatures object containing a SummarizedExperiment named "peptides"  
peptide\_library\_ids  
                  a vector of all peptide library ids in the experiment.

### Value

a ggplot2 object

### Examples

```
plot_nd_peptides(mspms::processed_qf)
```

---

plot\_pca              *plot\_pca*

---

### Description

Easily create a PCA plot from a QFeatures object containing mspms data. Ellipses are drawn around the points at a 95 Shape and colors are user specified.

### Usage

```
plot_pca(  
  mspms_tidy_data,  
  value_colname = "peptides_norm",  
  color = "time",  
  shape = "condition"  
)
```

**Arguments**

mspms\_tidy\_data      tidy mspms data (prepared from QFeatures object by mspms\_tidy)

value\_colname      the name of the column containing values.

color      the name of the variable you would like to color by.

shape      the name of the variable that you would like to determine shape by.

**Value**

a ggplot2 object

**Examples**

```
plot_pca(mspms::mspms_tidy_data)
```

---

|               |  |
|---------------|--|
| plot_qc_check | <i>plot_qc_check plot the the percentage of the peptide library undetected in each sample per each sample group.</i> |
|---------------|--|

---

**Description**

plot\_qc\_check plot the the percentage of the peptide library undetected in each sample per each sample group.

**Usage**

```
plot_qc_check(
  processed_qf,
  peptide_library = mspms::peptide_library$library_id,
  full_length_threshold = NULL,
  cleavage_product_threshold = NULL,
  ncol = 2
)
```

**Arguments**

processed\_qf      QFeatures object containing a SummarizedExperiment named "peptides"

peptide\_library      a vector of all peptide library ids in the experiment.

full\_length\_threshold      percent to use as threshold visualized as a vertical blue dashed line

cleavage\_product\_threshold      percent to use as a threshold visualized as a red dashed line

ncol      n columns.

**Value**

a ggplot2 object.

**Examples**

```
plot_qc_check(mspms::processed_qf)
```

---

```
plot_time_course      plot_time_course
```

---

**Description**

Easily plot a time course of all peptides in a QFeatures object by peptide.

**Usage**

```
plot_time_course(  
  mspms_tidy_data,  
  value_colname = "peptides_norm",  
  summarize_by_mean = FALSE  
)
```

**Arguments**

```
mspms_tidy_data      tidy mspms data (prepared from QFeatures object by mspms_tidy())  
value_colname        the name of the column containing values.  
summarize_by_mean    whether to summarise by mean (TRUE- show error bars +- 1 standard deviation)  
                     or not (FALSE)
```

**Value**

a ggplot2 object

**Examples**

```
# Determining peptide of interest  
max_log2fc_pep <- mspms::log2fc_t_test_data %>%  
  dplyr::filter(p.adj <= 0.05, log2fc > 3) %>%  
  dplyr::filter(log2fc == max(log2fc)) %>%  
  dplyr::pull(peptide)  
  
# Defining QFeatures filter  
filtered <- mspms::mspms_tidy_data %>%  
  dplyr::filter(peptide == max_log2fc_pep) %>%  
  plot_time_course()
```

---

|              |                     |
|--------------|---------------------|
| plot_volcano | <i>plot_volcano</i> |
|--------------|---------------------|

---

**Description**

create a volcano plot to generate log2fc and adjusted p values for experimental conditions

**Usage**

```
plot_volcano(  
  log2fc_t_test_data,  
  log2fc_threshold = 3,  
  padj_threshold = 0.05,  
  facets = "grid",  
  ncol = 1  
)
```

**Arguments**

`log2fc_t_test_data` a tibble containing the log2fc and adjusted p values

`log2fc_threshold` the log2fc threshold that you want displayed on plot

`padj_threshold` the padj threshold that you want displayed on plot

`facets` how facets should be displayed. Accepted values are grid and wrap

`ncol` ncol to include if facets = "wrap"

**Value**

a ggplot2 object

**Examples**

```
p1 <- mspms::plot_volcano(mspms::log2fc_t_test_data, log2fc_threshold = 3)  
p1
```

---

|               |                      |
|---------------|----------------------|
| prepare_diann | <i>prepare_diann</i> |
|---------------|----------------------|

---

**Description**

prepare data from the pr\_matrix.tsv diann output. This can be either from DIA-NN or from Fragpipe (as it uses DIA-NN for quantification internally for MSFragger-DIA workflows)

**Usage**

```
prepare_diann(
  precursor_filepath,
  colData_filepath,
  peptide_library = mspms::peptide_library,
  n_residues = 4
)
```

**Arguments**

`precursor_filepath`      filepath to report.pr\_matrix.tsv file exported from DIA-NN.

`colData_filepath`        file path to .csv file containing colData. Must have columns named "quant-Cols", "group", "condition", and "time".

`peptide_library`         peptide library used with experiment. Contains columns "library\_id", "library\_match\_sequence", and "library\_real\_sequence".

`n_residues`              the number of amino acid residues before and after the cleavage site to generate a cleavage seq for.

**Value**

a QFeatures object.

**Examples**

```
precursor_filepath <- system.file(
  "extdata/diann_report.pr_matrix.tsv",
  package = "mspms"
)
colData_filepath <- system.file("extdata/diann_colData.csv", package = "mspms")
prepare_diann(precursor_filepath, colData_filepath)
```

---

```
prepare_fragpipe      prepare_fragpipe
```

---

**Description**

Prepare a label free quantification file exported from Fragpipe for subsequent mspms analysis.

**Usage**

```
prepare_fragpipe(
  combined_peptide_filepath,
  colData_filepath,
  peptide_library = mspms::peptide_library,
  n_residues = 4
)
```

**Arguments**

|                           |   |
|---------------------------|---|
| combined_peptide_filepath | file path the combined_peptide.tsv file generated by FragPipe.  |
| colData_filepath          | file path to .csv file containing colData. Must have columns named "quant-Cols", "group", "condition", and "time".          |
| peptide_library           | peptide library used with experiment. Contains columns "library_id", "library_match_sequence", and "library_real_sequence". |
| n_residues                | the number of amino acid residues before and after the cleavage site to generate a cleavage seq for.                        |

**Value**

a QFeatures object containing a summarizedExperiment named "peptides"

**Examples**

```
fragpipe_combined_peptide <- system.file("extdata/fragpipe_combined_peptide.tsv", package = "mspms")
colData_filepath <- system.file("extdata/colData.csv", package = "mspms")
# Prepare the data
fragpipe_prepared_data <- mspms::prepare_fragpipe(fragpipe_combined_peptide, colData_filepath)
```

---

|            |   |
|------------|---|
| prepare_pd | <i>prepare_pd Prepare a label free quantification file exported from Proteome Discoverer for subsequent mspms analysis.</i> |
|------------|---|

---

**Description**

prepare\_pd Prepare a label free quantification file exported from Proteome Discoverer for subsequent mspms analysis.

**Usage**

```
prepare_pd(
  peptide_groups_filepath,
  colData_filepath,
  peptide_library = mspms::peptide_library,
  n_residues = 4
)
```

**Arguments**

|                         |   |
|-------------------------|---|
| peptide_groups_filepath | filepath to PeptideGroups.txt file exported from proteome discoverer. |
|-------------------------|---|

colData\_filepath file path to .csv file containing colData. Must have columns named "quant-Cols", "group", "condition", and "time".

peptide\_library peptide library used with experiment. Contains columns "library\_id", "library\_match\_sequence", and "library\_real\_sequence".

n\_residues the number of amino acid residues before and after the cleavage site to generate a cleavage seq for.

**Value**

a QFeatures object containing a summarizedExperiment named "peptides"

**Examples**

```
peptide_groups_filepath <- system.file(
  "extdata/proteome_discoverer_PeptideGroups.txt",
  package = "mspms"
)
colData_filepath <- system.file("extdata/colData.csv", package = "mspms")
```

---

```
prepare_peaks
```

---

*Prepare PEAKS label-free quantification data for MSP-MS analysis*

---

**Description**

This function reads, validates, transforms, and converts a PEAKS LFQ file into a ‘QFeatures’ object compatible with the ‘mspms’ workflow.

**Usage**

```
prepare_peaks(
  lfq_filepath,
  colData_filepath,
  quality_threshold = 0.3,
  peptide_library = mspms::peptide_library,
  n_residues = 4
)
```

**Arguments**

lfq\_filepath Path to the PEAKS ‘.csv’ file containing peptide-level LFQ data.

colData\_filepath Path to a ‘.csv’ file containing sample metadata (‘colData’). Must include the columns “quantCols”, “group”, “condition”, and “time”.

quality\_threshold Minimum quality score required for a peptide to be retained. Peptides below this threshold are filtered out (default ‘0.3’).

peptide\_library      A peptide library used in the experiment, typically 'mspms::peptide\_library'. Must include "library\_id", "library\_match\_sequence", and "library\_real\_sequence".

n\_residues            Number of amino acid residues to include on each side of the cleavage site when generating cleavage sequences (default '4').

**Value**

A 'QFeatures' object containing a 'SummarizedExperiment' named "peptides".

**Examples**

```
lfq_filepath <- system.file(
  "extdata/peaks_protein-peptides-lfq.csv",
  package = "mspms"
)
colData_filepath <- system.file(
  "extdata/colData.csv",
  package = "mspms"
)
peaks_qf <- mspms::prepare_peaks(lfq_filepath, colData_filepath)
```

---

|              |  |
|--------------|--|
| prepare_sage | <i>prepare_sage Prepare a label free quantification file exported from Sage for subsequent mspms analysis.</i> |
|--------------|--|

---

**Description**

prepare\_sage Prepare a label free quantification file exported from Sage for subsequent mspms analysis.

**Usage**

```
prepare_sage(
  sage_lfq_filepath,
  colData_filepath,
  peptide_library = mspms::peptide_library,
  n_residues = 4
)
```

**Arguments**

sage\_lfq\_filepath      filepath to lfq.tsv file output from

colData\_filepath      file path to .csv file containing colData. Must have columns named "quant-Cols", "group", "condition", and "time".

|                 |   |
|-----------------|---|
| peptide_library | peptide library used with experiment. Contains columns "library_id", "library_match_sequence", and "library_real_sequence". |
| n_residues      | the number of amino acid residues before and after the cleavage site to generate a cleavage seq for.                        |

**Value**

a QFeatures object containing a summarizedExperiment named "peptides"

**Examples**

```
sage_lfq_filepath <- system.file(
  "extdata/sage_lfq.tsv",
  package = "mspms"
)
colData_filepath <- system.file("extdata/colData.csv", package = "mspms")
prepare_sage(sage_lfq_filepath, colData_filepath)
```

---

process\_qf

*process\_qf*

---

**Description**

process\_qf

**Usage**

```
process_qf(prepared_qf)
```

**Arguments**

|             |   |
|-------------|---|
| prepared_qf | this is a QFeatures object containing a SummarizedExperiment named "peptides" |
|-------------|---|

**Value**

a QFeatures object containing a SummarizedExperiments named "peptides", "peptides\_log", "peptides\_log\_norm", "peptides\_log\_impute\_norm", and "peptides\_norm"

**Examples**

```
processed_qf <- process_qf(mspms::peaks_prepared_data)
```

---

|              |  |
|--------------|--|
| processed_qf | <i>processed_qf A QFeatures object prepared from PEAKS data of Cathepsin data that has been processed (imputation/normalization)</i> |
|--------------|--|

---

### Description

processed\_qf A QFeatures object prepared from PEAKS data of Cathepsin data that has been processed (imputation/normalization)

### Usage

```
processed_qf
```

### Format

```
## 'peaks_prepared_data' An instance of class QFeatures containing 5 assays: [1] peptides: SummarizedExperiment with 2071 rows and 42 columns [2] peptides_log: SummarizedExperiment with 2071 rows and 42 columns [3] peptides_log_norm: SummarizedExperiment with 2071 rows and 42 columns [4] peptides_log_impute_norm: SummarizedExperiment with 2071 rows and 42 columns [5] peptides_norm: SummarizedExperiment with 2071 rows and 42 columns
```

**peptides** Peptide Sequence Detected ...

### Source

<mspms processed data originally from PEAKS files found in "tests/testdata/protein-peptides-id.csv" and "tests/testdata/protein-peptides-lfq.csv">
